

Objectives: The objective of this lab was to use `FileWriter` and `PrintWriter` class to create text file then store 10 random numbers inside it. Then use `ReadFile` class to read the data from the created file and feed it to the program in the form of an array. After that, sort the array and print it and output the maximum value in the array using message dialog box. Thus, in order to perform this lab, I had to learn how to code file, create file, printwrite, read file, random, sort, and output dialog message box classes. My goal was to create a program that can create a file, generate 10 random numbers, store them in the file, read the file to get the numbers, sort them, and print out the maximum value.

Program:

```
1 import java.util.Random;
2 import java.io.*;
3 import java.util.Arrays;
4 import java.util.Scanner;
5 import javax.swing.JOptionPane;
6
7 public class Lab_2 {
8     public static void main (String[] args) throws IOException {
9         PrintWriter outputFile1 = new PrintWriter("Lab_2.txt");
10        for (int i = 0; i < 10; i++) {
11            Random rand = new Random();
12            outputFile1.println(rand.nextInt(1000));
13        }
14        outputFile1.close();
15        System.out.println("Written to Lab_2.txt");
16
17
18        File file = new File("Lab_2.txt");
19        Scanner inputFile = new Scanner(file);
20        String[] a = new String[10];
21        for (int i = 0; i < 10; i++) {
22            a[i] = inputFile.nextLine();
23        }
24        System.out.println(Arrays.toString(a));
25        Arrays.sort(a);
26        System.out.println("\nThe sorted array is: ");
27        System.out.println(Arrays.toString(a));
28        JOptionPane.showMessageDialog(null, "The maximum value is " + a[9]);
29        System.exit(0);
30    }
31
32 }
```

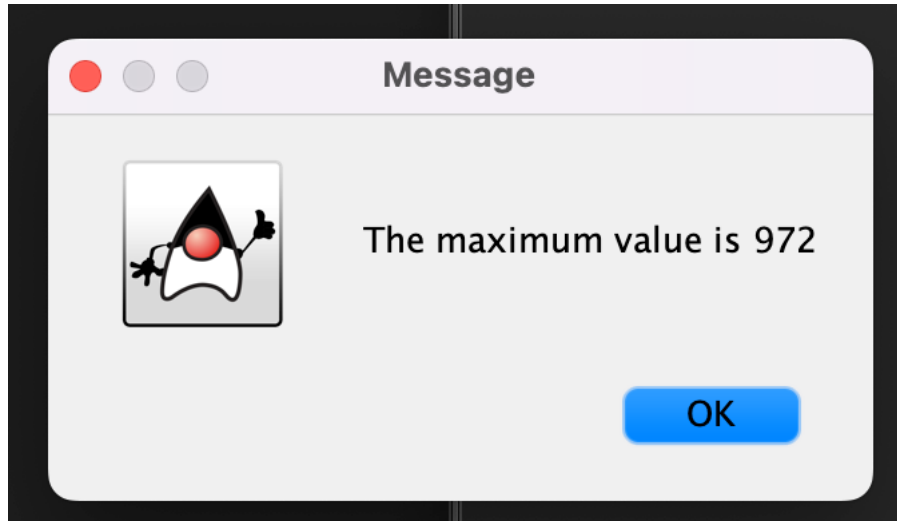

Results:

- The console log that the program printed out.

```
[st@st Lab 2 % javac Lab_2.java  
[st@st Lab 2 % java Lab_2  
Written to Lab_2.txt  
[497, 685, 703, 972, 628, 780, 500, 721, 667, 530]  
  
The sorted array is:  
[497, 500, 530, 628, 667, 685, 703, 721, 780, 972]
```

- The dialog message box to indicate the maximum value in the array.

- The file that the program created and store 10 random numbers in it.
